

INSTALLATION INSTRUCTIONS #NowTheFunBegins!

1
YOUR PACKAGE HAS ARRIVED OR YOU HAVE COLLECTED IT!

Make sure you have ALL your bits & pieces!

Tree & branch designs will have an extra rectangle piece, this is incase you would like to make your trunk or branch higher or longer. This will need to be cut/trimmed and shaped to fit the end of your design.

MMMMMH!! Looking a tad crinkly? Not to worry, this is just the backing paper you're about to recycle!!! Grab that credit card, give it a good hard rub! Picture side up!

Unwrap the protective cardboard and your decal will be tightly wrapped around the OUTSIDE of the cardboard tube to keep it SAFE! Included is a colour picture of your unique colour choices!

APPLICATION EQUIPMENT

WONDERING WHAT EXTRA BITS ARE FOR?

A,B,C etc will be where you will need to join (Please make sure when joining you overlap the vinyl by at least 2mm)
1,2,3 etc is the order of the design, eg, the forest will be tree 1 tree 2 etc.

2

SURFACE PREP

In order for your decal to stick you need to have a clean, dry surface. So grab yourself a dry cloth and give the wall a quick wipe down before you begin.

If you have recently painted you will need to wait 2 weeks in winter and 1 week in summer for the paint to fully cure.
In winter, warm the room up a bit or even the wall surface, the glue needs heat to activate. Extreme cold could cause the decal or the bigger pieces to fall off the wall.

3

THE DUMMY RUN

Before you apply your decal you need to position the graphic on the wall using masking tape so you can check you are happy with the position. Your next move is going to be the final one!!

NO SECOND CHANCES!

AT THIS POINT YOU MIGHT WANT TO TAKE A SPIRIT LEVEL OR MEASURING TAPE TO MAKE ABSOLUTELY SURE IT IS STRAIGHT OR LEVEL.

4

THE MAGIC TRICK

Now that you have found where you want your decal to go cut the masking tape along the end of decal with your craft knife. This way you are leaving a marking on the wall so you know where you wanted it to go. You'll see what I mean just now! Put it upside down on a smooth, flat surface, picture facing down.

OOOOH!

We nearly forgot this important part... You have 3 layers to your decal.

- 1 - Paper backing, to be recycled!
- 2 - Vinyl sticker, the actual bit you paid for!
- 3 - Clear app tape, plastic sticky bit, your little helper!
- TBRC - to be recycled!

5

THE PRESS

Using a squeegee or a hardish plastic object such as a credit card (or any other card), press the decal all over using strokes in one direction.

This ensures the vinyl is fully adhered to the top clear application tape.

6

THE PEEL

Placing your decal design side down, start peeling away the white backing paper ensuring that your design is stuck to the clear application tape.

BE PATIENT!!

If there are bits stuck to the paper backing just press back gently onto the clear app tape. Once the white backing paper is off place your decal against the wall. Make sure your masking tape markers are lining up. Using your squeegee, press the decal all over using strokes in one direction again.

7

8

THE STICK
Now the graphic is on the wall, carefully peel off the application tape from one of the corners sliding it back across the wall revealing the vinyl graphic. If your vinyl sticks to the clear app tape, just push it back on the wall as below and keep going!

9

THE BIG REVEAL

Bubbling may occur after the graphic is on the wall but all you need to do is pop them with a pin and smooth the area with your finger. Same applies to small creases!

10
